

evolution 1 – Default Cause & Effect Setting

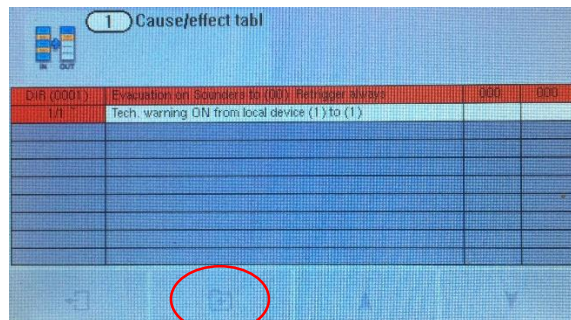

The evolution 1 Panel is pre-programmed with a line of Cause & Effect, such that any Alarm on the panel will activate the Evacuation condition on all Output, including Sounders, Beacons & Relay devices.

The following instructions detail how to return the Panel to this default setting.

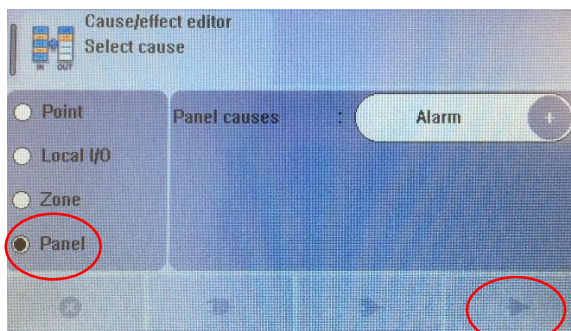

1. Select the Cause & Effect icon from the home screen.

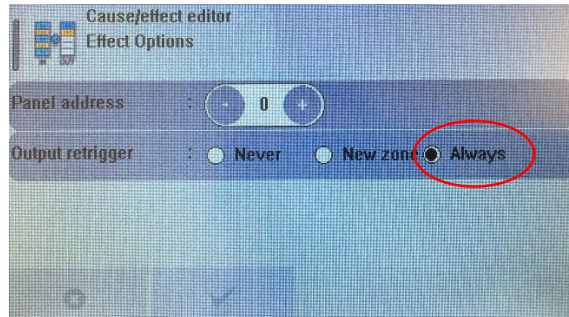

2. Select the folder with + symbol icon from the Cause & Effect screen. NOTE: If you have any unwanted lines of Cause and effect you can click on them and press the dust bin icon to delete.

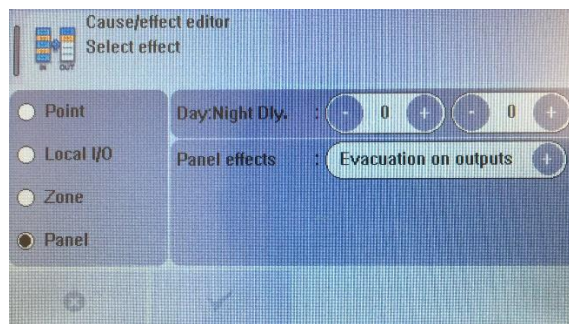

3. Select Panel and choose “Alarm” from the list of options. Then press the icon bottom right to proceed.

4. Select panel address = 0 and select Always for the output retriggering. If you wish to set the effect on an alternative panel on the network, enter the appropriate panel address. Then press  to proceed.

5. Select Panel and choose "Evacuation on Outputs" from the list of options. Then press  to proceed.

NOTE: The Evolution Config software cannot be used to program or save cross-network cause and effect. This needs to be done on the control panel and recorded elsewhere.
