EV-ASD

Aspirating Smoke Detection

The EV-ASD1/2 is a professional air-sampling unit, designed to compliment conventional and analogue addressable system technology, by combining standard field-serviceable smoke detectors with a stand-alone air-sampling solution. Ideal for the protection of difficult to access, environmentally demanding, aesthetic or architecturally restricted areas, the EV-ASD is rugged, easy to install, weatherproof, and requires no special tools or software to configure.

The unit is fitted with pre-wired detector bases and has an internal EV-Mini I/P module for direct connection to the analogue addressable loop, providing alarm and fault status.

Air is drawn from the protected area through one or two perforated 25mm pipes. A powerful fan together with sophisticated air-flow monitoring and control circuitry ensures that transport delays are minimised and air-flow is kept within working limits. System status and flow control is continuously displayed (per channel), with on-board fault relays allowing remote fault monitoring. Power management ensures that operating current is kept to a minimum, allowing superior performance and optimisation of external power supply and standby battery resources.

- General area protection (<100m² per pipe/channel)
- Inaccessible areas
- Shafts and service ducts
- Locked or security controlled areas
- Harsh environments (wet and/or dusty)
- Ceiling and floor voids
- Remote sampling of ventilation ductwork
- Hose-down areas e.g. food preparation, pharmaceutical, cleaning Vandal-proof applications
- Economical, single or dual area aspirated 'fire' detection
- Uses conventional or analogue addressable detectors (not supplied)
- Brand compatible detection allows true integration and control
- Detection element can be serviced or replaced
- 1 or 2 sampling pipes each up to 50m in length
- Easy to install, commission and maintain
- Low operating current
- Rugged IP65 enclosure

NITTAN

Mechanical

Sampling Pipe Inlets 1 or 2 (EV-ASD1 & EV-ASD2 respectively)

Detectors 1 or 2 conventional or analogue addressable smoke (not supplied)

Sampling Pipe Length 50m (max) per pipe. For VdS approved installations, consult

manua

Sampling Pipe Diameter 1 or 2 x 25mm or 3/4" (27mm) nominal bore

Exhaust Air Pipe Outlet 1 (25mm or 3/4")

Electrical

Supply Voltage Nominal 24Vdc (18 to 30Vdc)

Operating Current 300mA max (fan speed dependant)

Fault Monitring Power failure (common), Flow fault per channel

Relay Outputs 1 or 2 changeover relays

Cable Terminals Removable 2.0mm maximum

Display 5 common status plus 10 segment LED bargraph per channel

Controls External weatherproof - Code protected

Flow Monitoring Thermal, with adjustable High/Low and sensitivity limits

Environmental

Operating Temperature -10 to +60°C

Operating Humidity 10 to 95% (non condensing)

IP Rating IP65 with exhaust pipe fitted and cable entries sealed

General

Filtration (standard internal) Replaceable dust particle. Harsh environment filter also available

Filtration (external)

Optional, external harsh environment filter

Housing Material

ABS, with tamper-proof locking mechanism

Mounting Upright, horizontal or Inverted

Weight 2.3kg

Dimension (W x H x D) 259 x 184 x 166mm Equipment Approvals EN54-20, CE, VdS, CPD
