

NITTAN

Firebeam

Beam Smoke Detector

The ultimate optical beam smoke detector available today, Firebeam provides reliable, cost effective solutions for protecting large areas.

Building movement and accessibility have, in the past, made beam detection unreliable, difficult and time consuming to commission as well as hard to maintain, but Firebeam overcomes these issues through its advanced motorised technology. The beam aligns itself to the centre of the reflector when commissioning and will automatically re-align itself when building movement occurs; it can also be adjusted from ground level if required.

NITTAN

- Intelligent motorised beam head
- Ground level control
- Fast commissioning (around 5 minutes in fast mode)
- Ultra low power usage (3.5mA in normal service)
- IP65 rating
- Self test facility
- 7 different menu languages
- Easy to commission and adjust to suit environments
- Anti condensation accessories available
- Versatile fitting kits available
- Up to 100m range with extension kit options

Speed, ease of use and unprecedented reliability make this the professional's choice for protecting life and property worldwide. Using this advanced beam will mean less time commissioning, less maintenance, reduced costs and, importantly, fewer false alarms.
