evolution 1 Config tool.

Follow the procedure below to install the evolution 1 config tool to PC. This must be completed before connecting the PC to the Panel for the first time, as it will allow correct installation of the USB Driver.

1. Download the "evolution 1 PC Configuration Tool" from www.nittan.co.uk

2. Copy the folder "evolution-1 Config_Vxx" to the route C: Drive on the PC.

3. Unzip the folder on your C: Drive.

4. Open this folder and open the sub"evolution-1 Config_Vxx" folder within, then open the sub folder "Evolution".

5. In this folder you will find the "Evolution.exe" Application with Orange Icon.

6. Right click the Icon and "create short cut" to place on your desk top.

7. Double Click the Icon to run the program.

8. If you connect the PC to Panel by USB, you should receive a Windows notification for the USB Driver.

9. If you receive an error message, or the communication fails, enter your PC Device Manager and locate the USB Serial Interface. Here you can select "Update Driver", then Browse your PC to the "evolution-1 Config_Vxx" folder and select.

The Evolution Config software cannot be used to program or save cross-network cause and effect. This needs to be done on the control panel and recorded elsewhere.
